

GDTP Onboarding and Access Standard

Version 3.2 | Effective 1 Sep 2026 | Owner: Aoife Brennan, Security Lead

1. Purpose and scope

This standard sets out what must be in place before a new joiner on the Garda Digital Transformation Programme (GDTP) is given access to programme systems, and who may approve each level of access. It applies to employees and contractors starting on the programme.

2. Onboarding requirements

Each requirement has one system of record. Evidence should be taken from that system of record. The HR master record mirrors vetting, clearance and training status weekly and is not authoritative for them.

#	Requirement	System of record	Acceptable evidence
R1	Contract signed	E-signature service	E-signature certificate of completion
R2	Garda Vetting approved	Garda Vetting Register	Register entry with status Approved
R3	Security Clearance approved	National Security Office (NSO)	NSO clearance letter
R4	Cyber training passed (Cyber Awareness, Data Protection, Acceptable Use)	Cyber Training Tracker	Tracker entry with Final Status Passed
R5	Device assigned	IT provisioning ticket	Ticket line item: laptop assigned, asset tag recorded
R6	Account provisioning complete, including MFA activated	IT provisioning ticket	Ticket shows email, VPN and MFA all complete (MFA status Activated)

Summaries, checklists and emails compiled from these systems are derived material and are not independent evidence.

3. Access tiers

Tier	Requirements	Approved by
Induction	Contract signed (R1)	Onboarding Coordinator
Corporate	Contract (R1), vetting (R2), training (R4), device (R5) and email/VPN account created (part of R6; MFA is not required at this tier)	Onboarding Coordinator
Production	All six requirements (R1 to R6), including MFA active and clearance verified	Security Lead

4. Handling conflicts between sources

The system of record wins for its own fact. When sources disagree, record the discrepancy and recommend that the owning team updates their record. Do not overwrite another team's record. Where authority is unclear, or where identity cannot be confirmed, escalate to the Onboarding Coordinator for a human decision.

5. Identity matching

Match records on stable identifiers (employee ID, vetting reference, clearance reference, email address) together with date of birth. Never match on name alone.

6. Document control

Item	Detail
Version	3.2
Effective date	1 Sep 2026
Supersedes	This version supersedes v2.9 (effective 1 Mar 2025).
Owner	Aoife Brennan, Security Lead
Change summary	Account provisioning now includes MFA activation. MFA must be active before Production access is granted; there is no post-start grace period for Production.
